MARAZZI USA

porcelain • ceramic • glass • mosaics

(2014-2015 residential & commercial catalog)

(company profile)

Marazzi USA plays a key role within the strong global presence of the Marazzi Group by decisively meeting the tile needs of the North American market. Manufacture and sourcing of a vast array of products – glazed ceramics, porcelains, glass mosaics, natural stones, metallics – brings a total tile package that addresses aesthetic and performance requirements of designers, architects and homeowners.

Always leading while learning; always integrating the best approaches in technology, communication and management; always partnering with artists, technicians, entrepreneurs, forward-thinking individuals and companies of various backgrounds, Marazzi is a multinational, multi-cultural, worldwide enterprise that leads the world in ceramic tile manufacture and distribution still based on the vision and systematic strategy of its founder, Filippo Marazzi.

In 1935 Marazzi built his first factory in Sassuolo, Italy on a wooden platform attached to four conveniently located poplar trees. That humble beginning used the best practices of the region's handcrafted terracotta as a basis, then began to develop and incorporate innovative automated production processes that became the foundation for today's ceramic industry leader.

(company-heritage)

Attuned to the nuances of the ceramic industry since he was a young man, Filippo Marazzi, grandson and namesake of the founder, recognized the untapped American market for tile. He boldly focused his pioneering vision for expansion into building the first Italian-owned ceramic manufacturing plant in the U.S.

Solid experience in the European markets and synergy between Italian and domestic leadership launched the Marazzi USA manufacturing plant in 1982 in Sunnyvale, Texas. From the beginning, research and development, sound financial practices and close relationships with our customers brought continual growth, expansion and industry recognition.

For 28 years Marazzi USA has resoundingly met the unique requirements of the expanding American marketplace. Present in all channels of distribution, collaboration with our worldwide partners exponentially expands the product lines, design resources and technological capabilities Marazzi USA brings to its customers.

(company-values)

The corporate values governing Marazzi USA are not just words on paper, but continue to be those principles present at its inception and groundbreaking. Commitment to core values of integrity, fair business practices and ethical treatment of employees, customers and industry partners remains a top priority.

Recognizing that our customers are our primary business partners, every day we intentionally strive to achieve unparalleled customer satisfaction by supplying a broad range of quality products, delivered in a timely manner, with exemplary service at all levels. Recognizing that our products literally come from the earth, we continually practice environmentally-friendly principles of replace, reuse, recycle.

Our constant attention to the ever-changing tile market brings proactive responses to each customer's needs. Strong alliances within the Marazzi Group ensure leading-edge design input from throughout the world; identify and tap into market trends which affect the industry; and facilitate cost containment efficiencies that benefit customers in supply and transportation channels.
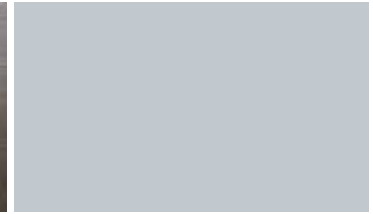

(our mission)

Marazzi recognizes that the continued success of our company relies on the well-being of our employees, our communities and the environment. We are committed to pursuing sustainable solutions to modern business challenges that support and regenerate these key elements.
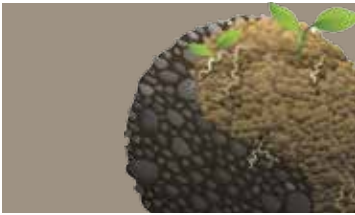

(corporate responsibility)

Regeneration, responsibility and leadership begin from within. In early 2008, partnership with Marazzi employees, non-profit organizations and an internationally recognized sustainability consultancy led to the development of a comprehensive sustainability strategy. Our goal and challenge included looking beyond one aspect of our products to integrate sustainability throughout our organization.

First, we assessed our products for LEED credit contribution; explored ways to increase recycled content and; ensured healthy indoor air quality through VOC testing.

Today, we are moving beyond products to assess the impact of our entire operation. Ultimately, it is the total Marazzi footprint that impacts our planet. From the Marazzi corporate headquarters to our manufacturing facilities, we are quantifying our environmental footprint and benchmarking our corporate social responsibility activities. Through MindClick SGM's 360° Sustainability Audit™ we assessed our products, facilities, corporate social responsibility activities, and customer and employee sustainability practices. This is helping us understand where we excel and how we can positively improve our impact on the planet, our communities, our employees and our customers.

To learn more about Marazzi's Elements initiatives, visit http://marazzitile.com/sustainable/sustainable
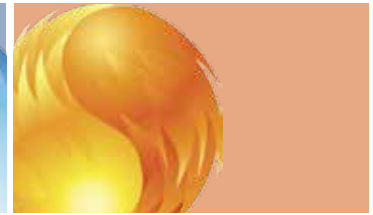

(sustainability naturally)

As a part of the Marazzi Group, the concept of quality naturally extends to include both social and environmental factors. Marazzi USA believes that these socially significant goals must also be pursued along with objectives related to the quality of its products and services.

Marazzi USA understands that to maintain its role as a leader and educator in the tile industry, a solid commitment to create a corporate sustainability plan is not just important, but necessary. A commitment to sustainability starts at the stakeholder level, and carries through to employees, with engagement on every level.

While marketing channels in every industry are saturated with environmental claims that are truly questionable, we believe it is important to be recognized as a company that contributes recognizable and quantifiable steps towards sustainable action.

Consumer awareness has taken on a new level of sophistication, and sustainable design professionals' expectations are reaching new levels. Credible claims can only be made as a result of significant organization-wide commitments to sustainable leadership.

In seeking to understand the world around them, ancient philosophers categorized matter in terms of water, earth air, and fire. These same primary elements are at the core of our mission to respect, restore, and protect.

(earth)
Durability Stability Timelessness

The simple elegance of tile makes it an appealing choice for those who seek the durability, stability and timelessness of the earth element. Since the first medieval tilers stamped custom designs into unglazed clay, tile has remained an essential building material. Resonating with natural beauty, Marazzi tiles embody the essence of Earth. As a building material, tile has an exceptionally low life cycle cost. The typical lifespan of tile is 50 years, and ceramic tile costs less per year than all other floor finishes over the life of a building. From an environmental standpoint, tile excels in the simplicity of its inputs and manufacturing process.

At Marazzi, we strive to incorporate recycled content into all of our products. We also recognize the importance of creating industry-wide regional clay product recycling programs to increase the amount of post consumer waste in new tile products.

(water)
Reliance Luxury Flow

The caress and vitality of water softens, relaxes and energizes, interacting with its surroundings to shape and nourish. Like water, tile is adaptable to its environment. Marazzi tiles create luxurious, resilient and tranquil environments in areas where carpets can't be used. Water is also essential to all life. As we experience global climate shifts and continually increasing population growth, water scarcity is becoming an increasingly critical point of concern.

Because we recognize that we must all do our part to protect and conserve this vital resource, Marazzi reuses 100% of wastewater generated during the manufacturing process.

(air)
Crisp Clean Pure

Elegant and natural, tile imbues indoor and outdoor spaces with a refined elemental allure. Increasingly clean air is being recognized as a precious and finite resource; tile provides a healthy alternative to other flooring products. The clean lines and solid surfaces of Marazzi tiles make them easier to clean and maintain than other types of floors, contributing to improved indoor air quality, which can positively affect the health and productivity of occupants.

Tile provides a healthy alternative to other flooring products. Inherently, Marazzi tile does not emit any volatile organic compounds, contributing to improve indoor air quality and the health and productivity of your occupants.
To reduce our corporate footprint we are transitioning to the use of recycled materials for our office supplies and developing an environmentally preferable purchasing program for our corporate offices.

(fire)
Innovation Transformation Inspiration

The beauty of Marazzi tile brings inspiration to any project. Like fire transforms clay, Marazzi is committed to transforming our company to be more socially and environmentally responsible. As we embark on the path to increased sustainability, we look to science, the design community, clients and our local communities for insight. We recognize that other tile manufacturers who may ordinarily be viewed competitors are valuable and needed partners in the transformation of our industry. Together we can drive innovation and aggregate demand for more regenerative practices and more energy efficient products.

Because fire is a core element in the manufacturing of Marazzi products, we understand the critical importance of pursuing energy efficiency measures and researching renewable energy sources and emerging reduced-impact production technologies.

The following symbols were developed to provide a quick easy reference for product selection.
Each product page will display these symbols on the top right hand corner.

Tile selections: These symbols allow for quick identification of all types of tile available in each individual product line.

Floor Tile
Tile meets all criteria for use on floors; however, it may also be used on vertical applications such as walls, countertops and fireplace surrounds. See Abrasion Resistance, Coefficient of Friction and Frost Resistance for installation-specific details.

Wall Tile
Tile meets all criteria for use on vertical applications such as walls, backsplashes and fireplace surrounds. See Abrasion Resistance and Frost Resistance for installation-specific details.

M Modular Tile
Smaller sized tiles feature standardized units or dimensions and can be installed individually or in conjunction with Field Tile or Wall Tile to create more elaborate, custom patterns.

3d 3d Printing Technique
Marazzi's state-of-the-art 3d printing technique, uses the latest in digital print technology, allowing for infinite design capabilities unique to Marazzi. Marazzi is the only manufacturer in the US that can do digital print up to 360 dpi, direct to tile. At this maximum resolution and with the unique grayscale printing technique, Marazzi reaches finer, crisper and smoother definition for printed designs than other digital products. A stunning palette of more than 100 square feet with no repetition, at maximum resolution.

R Rectified Tile
Tile that has had all edges mechanically finished to achieve a more precise facial dimension.

Decorative Tile
Specialty tiles designed to enhance floor and wall tile when used as inserts, borders and special accents.

Trim Available
Various complementary pieces designed to finish edges of field tile.

Suitable for Outdoors
The combination of Frost Resistance and Coefficient of Friction results for this series makes it appropriate for exterior horizontal (flat) surfaces. See ADA criteria for ramps.

Shade Variation: Always view several samples, before making your final selection and before authorizing installation of actual project.

V0 Very Uniform Appearance
Pieces of the same shade value are very uniform and smooth in texture.

V1 Uniform Appearance
Differences among pieces from the same production run are minimal.

V2 Slight Variation
Clearly distinguishable differences in texture and/or pattern within similar colors.

V3 Moderate Variation
While the colors and/or texture present on a single piece of tile will be indicative of the color and/or texture to be expected on the other tiles, the amount of color and/or texture on each piece may vary significantly. It is recommended that the entire range be viewed before selection.

V4 Substantial Variation
Random color and/or texture differences from tile to tile, so that one tile may have totally different colors and/or textures from that on other tiles. Thus, the final installation will be unique. It is recommended that the entire range be viewed before selection.

Frost Resistant
Industry criteria dictate that tile shall not exceed 5% water absorption to be recognized as frost resistant. To be recognized as Porcelain tile, the water absorption rate cannot exceed 0.50% (impervious). Wall tile must not exceed 20% water absorption and is not frost resistant.

Abrasion Resistance: This set of symbols was created to allow for quick identification of class ratings for durability.

0 Class 0
Tile in this class should not be exposed to wear/traffic or aggressive maintenance practices and is generally used on walls. See Frost Resistance for installation-specific details.

I Class I
Tile in this class may withstand soft-soled foot traffic, provided that dirt and/or other abrasives are not present on the wear surface. Class I tile should not be used in areas with direct access to the outside or large amounts of foot traffic. See Frost Resistance for installation-specific details.

II Class II
Tile in this class may withstand soft-soled and some normal foot traffic provided the dirt and/or other abrasives are kept to a minimum. Class II tile should not be used in areas with direct access to the outside, large amounts of foot traffic, or areas exposed to abnormal footwear. See Coefficient of Friction and Frost Resistance for installation-specific details.

III Class III
Tile in this class may withstand normal footwear and regular traffic, with some dirt and/or other abrasives present in limited quantities. Tile in this class may be used in light commercial installations with limited foot traffic and with no direct access to the outside including residential kitchens and hallways, with limited traffic from the outside. See Coefficient of Friction and Frost Resistance for installation-specific details.

IV Class IV
Tile in this class may withstand heavier amounts of traffic with greater amounts of dirt and/or other abrasives present including commercial kitchens and areas with regular traffic from the outside. See Coefficient of Friction and Frost Resistance for installation-specific details.

V Class V
Tile in this class may withstand constant foot traffic with larger amounts of dirt and/or other abrasives including airports, malls, and other commercial walkways subject to high volumes of foot traffic and constant traffic from the outside. See Coefficient of Friction and Frost Resistance for installation-specific details.

Dynamic Coefficient of Friction: Water, oil, grease or other fluids create slippery conditions. When installing floors in areas with exposure to these conditions, a minimum D.C.O.F. value of 0.42 is required. Additionally, extra caution is required with regards to product selection and proper maintenance. Visit www.tcnatile.com for complete information regarding the DCOF Acutest test method and values.

3d digital design definition

Marazzi's state-of-the-art 3d printing technique, uses the latest in digital print technology, allowing for infinite design capabilities unique to Marazzi. Marazzi is the only manufacturer in the US that can do digital print up to 360 dpi, direct to tile. At this maximum resolution and with the unique grayscale printing technique, Marazzi reaches finer, crisper and smoother definition for printed designs than other digital products. A stunning palette of more than 100 square feet with no repetition, at maximum resolution.

Notes: * Decos are imported, suggested for interior residential applications only, have a dynamic coefficient of friction less than 0.42 (wet), and are made to complement Floor and Wall Tile.
         ** Trim is available in all colors and made to complement Floor and Wall Tile.
         † Wall tile, wall bullnose, and wall bullnose corner are made in Mexico.

3d digital design definition

Marazzi's state-of-the-art 3d printing technique, uses the latest in digital print technology, allowing for infinite design capabilities unique to Marazzi. Marazzi is the only manufacturer in the US that can do digital print up to 360 dpi, direct to tile. At this maximum resolution and with the unique grayscale printing technique, Marazzi reaches finer, crisper and smoother definition for printed designs than other digital products. A stunning palette of more than 100 square feet with no repetition, at maximum resolution.

All American Marazzi Tile products are dry pressed and manufactured by the monocottura (single-fired) process. The monocottura process was patented worldwide by The Marazzi Group in 1971 and is still the state-of-the-art technology in glazed ceramic floor and wall tile. American Marazzi Tile's monocottura products are more impact resistant than bicottura (twice-fired) products, are frost resistant and have a flat back for easier thin-set installation.

American Marazzi Tile's glazed ceramic and porcelain Floor Tile are suggested for most interior residential and commercial floor and wall applications as well as for most vertical and horizontal exterior applications. Where dynamic coefficient of friction is a concern, see ratings for particular product series.

GLAZED CERAMIC TILE

Floor Tile American Marazzi Tile's residential and commercial glazed ceramic Floor Tile are prized nationwide and represent the highest achievement in both quality and design. American Marazzi Tile's glazed ceramic Floor Tile products are produced with a porosity range of 2.0% to 5.0%, making them stronger and more impact resistant. These products reflect state-of-the-art glaze technology which allows aesthetic details in gloss and patterns never before accomplished.

Wall Tile American Marazzi Tile's large-scale, high-end, glazed ceramic wall tile combine the elegance of classic wall stones with the efficiencies of the monocottura process. Intricate silk-screened designs and trims are created on a non-vitreous body with a porosity range greater than 7%. These products are designed for interior wall usage in residential as well as commercial settings. A limited number of these products are also suitable for residential bathroom floor use; see Abrasion Resistance / Suggested Applications section for each product series.

GLAZED/UNGLAZED PORCELAIN TILE

Floor Tile The same technical characteristics found in American Marazzi Tile's unglazed porcelain tile are taken to new heights with American Marazzi Tile's unique glazed porcelain tile. Structured surfaces, rustic appearance and variegated veining and shading combine the benefits of unglazed porcelain tile — impervious, frost resistant, chemical resistant — with the aesthetic capabilities of glazed ceramic tile. All of American Marazzi Tile's porcelain tile products are produced with a porosity less than 0.50%.

Product Variations Color and other aesthetic features shown in this catalog are as close as the limitation of the printing process will allow and may vary from actual tile colors. Final selection should be made from actual tile samples. Samples of current inventory should be requested prior to order shipment since color, shade, finish and caliber (size) variations may exist from one production run to the next due to the inherent characteristics of fired clay products. Care should be taken to match colors and sizes when replacing tile or mixing different stocks. Additionally, caliber and shade should be checked when modularity is a concern. American Marazzi Tile cartons are clearly marked with product code, shade and caliber (where applicable) for easy identification.

Trim Consult each product series in this catalog for available trim. Trim should be ordered at same time as modular and Floor Tile to minimize color, finish and size variations. Verify the compatibility of trim with modular and Floor Tile before installation.

Availability American Marazzi Tile products are offered at over 250 independent stocking distributors throughout the United States, Canada, Mexico and the Caribbean. To locate your nearest distributor call American Marazzi Tile Customer Service at (972) 226-0110.

American Marazzi Tile products are tested to ensure that they meet or exceed the ANSI A137.1-1988 ceramic tile standards. Other special testing for slip-resistance (dynamic coefficient of friction), abrasion resistance, chemical resistance, impact resistance, porosity/water absorption, breaking strength, warpage and wedging is performed to maintain stringent levels of quality.

Abrasion Resistance / Suggested Applications Glazed ceramic and porcelain tile normally carry a abrasion resistance rating. Although there are no official industry standards, most manufacturers give their tile a rating number from 1 to 4+ according to the results of the Porcelain Enamel Institute (PEI) abrasion test, recommended by the American Society for Testing and Materials (ASTM).

In over 60 years of experience throughout the world, The Marazzi Group has learned that PEI test results alone do not completely represent the practical behavior of a glazed ceramic or porcelain tile. Therefore, American Marazzi Tile's Floor Tile products are subjected to several other rigorous tests which also measure glaze density, glaze cleanability after wear and permanence of gloss level after wear. According to this unique rating procedure, each American Marazzi Tile product series has been assigned a abrasion resistance rating number which is shown in this catalog and on merchandising materials. Abrasion resistance ratings are not representative of slip-resistance. Where dynamic coefficient of friction is a concern, see specific ratings for each product series.

Class 0 - Tile in this class should not be exposed to wear/traffic or aggressive maintenance practices and is generally used on walls.

Class I - Tile in this class may withstand soft-soled foot traffic, provided that dirt and/or other abrasives are not present on the wear surface. Class I tile should not be used in areas with direct access to the outside or large amounts of foot traffic.

Class II - Tile in this class may withstand soft-soled and some normal foot traffic provided the dirt and/or other abrasives are kept to a minimum. Class II tile should not be used in areas with direct access to the outside, large amounts of foot traffic, or areas exposed to abnormal footwear.

Class III - Tile in this class may withstand normal footwear and regular traffic, with some dirt and/or other abrasives present in limited quantities. Tile in this class may be used in light commercial installations with limited foot traffic and with no direct access to the outside.

Class IV - Tile in this class may withstand heavier amounts of traffic with greater amounts of dirt and/or other abrasives present.

Class V - Tiles in this class may withstand constant foot traffic with larger amounts of dirt and/or other abrasives.

Acid & Alkali Resistance American Marazzi Tile's glazed ceramic and porcelain tile offer considerable resistance to most acids, alkalies and other corrosive substances. Resistance values vary depending on the type of glaze used, color and finish of the product.

American Marazzi Tile does not recommend acid cleaning for either glazed ceramic or porcelain tile.

Dynamic Coefficient of Friction Water, oil, grease or other fluids create slippery conditions. When installing floors in areas with exposure to these conditions, a minimum D.C.O.F. value of 0.42 is required. Additionally, extra caution is required with regards to product selection and proper maintenance. Visit www.tcnatile.com for complete information regarding the DCOF Acutest test method and values.

These American Marazzi Tile products meet or exceed a minimum dynamic coefficient of friction of 0.42 (wet) when tested in accordance with ASTM DCOF AcuTest[SM]:

• Aida	• American Estates™	• Archaeology	• Arctic Bay
• Artea Stone	• Campione	• Cimmaron™	• Essentials
• Fontanella™	• Forest Impressions™	• Harmony™	• i Porfidi di Marazzi
• Imperial Slate	• Jade	• Lounge14™	• Province
• Riflessi di Legno	• San Savino™	• Saturnia	• Silk
• Soho	• Solaris	• Stone Age	• Stone Collection
• Timeless Collection	• Treverkchic	• Vesale Stone	• Walnut Canyon

The dynamic coefficient of friction may vary within and between production runs because of the inherent characteristics of fired clay products.

Tile should be maintained on a regular and frequent basis to prevent buildup of soil, grease, residue, soap detergents, sealers, dampness, liquids, etc., which may reduce the dynamic coefficient of friction; see Maintenance section for each product series.

Care and judgment should be used when selecting any hard surface flooring to be installed in areas where dampness, liquids, grease or inadequate maintenance is likely to be encountered.

Installation American Marazzi Tile's first choice products are calibrated (where applicable) for easier, more professional installation. Upon setting, choose tile alternatively from different boxes. It is recommended that all installations be thoroughly cleaned immediately following grouting to remove all grout residue. Do not install tile that is ≥ 18" in a brick / staggered pattern without first checking lippage at T-joints. It is recommended to have a maximum of 33% offset to avoid lippage when installing a brick/staggered pattern with tiles greater than 18" in length.

Selection of specific setting materials and grout are dependent upon subsurface, installation environment and the possibility of exposure to liquids, acids, etc. American Marazzi Tile recommends the installation procedures indicated in the current Tile Council of America "Handbook for Ceramic Tile Installation" or those recommended by the Ceramic Tile Institute of America.

Maintenance Most American Marazzi Tile glazed ceramic and porcelain tile require minimal maintenance. Either can generally be cleaned with clear water and/or a Ph neutral liquid cleaner (soapless). Follow with a clear water rinse and wipe dry to prevent film formation. As with most porcelains, spilled liquids may stain the light-colored products if not promptly removed. Neither sealing nor acid cleaning is recommended for any of American Marazzi Tile's glazed ceramic or porcelain tile.

The tile should be thoroughly cleaned of grout after installation (following the grout manufacturer's instructions) to assure ease of maintenance in the future. Tile, whether glazed ceramic or porcelain, should be maintained on a regular and frequent basis to prevent build up of soil, grease, residue, soap detergents, sealers, dampness, liquids, etc., to keep the surface clean and lessen slippery conditions.

Wash Group: One five gallon plastic pail, one deck brush (10 inches wide with two inch bristles) and one mop (rayon).

Rinse Group: A standard mop bucket with a mop wringer and one mop (rayon).

Procedure: Fill the five gallon Wash Group pail with hot water and p.H. neutral liquid cleaner (soapless) in concentrations according to manufacturer's recommendations. Half-fill the Rinse Group mop bucket with clear hot water.

Immerse the Wash Group mop in the five gallon pail of cleaner solution. Working in ten foot by ten foot sections, spread the cleaner solution to cover the ten square foot section. Scrub well with the deck brush.

Following the scrubbing, rinse the area with the mop and water from the Rinse Group. Proceed to the next ten square foot area and repeat these procedures until the floor is cleaned, changing both the wash solution and rinse water frequently as they become dirty.

Limited Warranty Marazzi USA warrants that its first choice ceramic tile is manufactured according to ANSI A137.1-1988 and meets or exceeds these requirements. If a tile is proven to contain a manufacturing defect, Marazzi USA will supply, free of charge, material of compatible color and shade as determined by Marazzi USA. Labor charges are expressly excluded from this warranty.

Marazzi USA makes no warranty as to the suitability of its tile for a particular installation. Marazzi USA does not warrant that its glazed ceramic or porcelain tile will not scratch, chip or show signs of wear.

Marazzi USA or the Marazzi USA Distributor must be notified of any claims or defects as soon as reasonably possible, but in any case, not later than one year after the goods have been delivered by Marazzi USA. This notification must be in writing or sent by certified mail. Claims concerning shade, appearance, caliber, finish or obvious defects in first choice production must be communicated before the tile is installed. No claims will be accepted for tile already installed or for defects in other than first choice material.

Marazzi USA specifically excludes liability for consequential or incidental damages, except where exclusion of consequential damage is not permitted by state law.

This limited warranty shall constitute the full extent of Marazzi USA's liability and is in place of all other warranties, express or implied, including the implied warranty of merchantability and the implied warranty of fitness for a particular purpose.
